SAFETYSCOPE

Asbestos Hazard Awareness Training

The purpose of this course is to increase awareness of asbestos hazards to help minimize employee exposure and risk of acquiring an asbestos-related disease, which therefore contributes to employee workplace safety.

Completion of this course alone does not meet the intent of applicable regulations nor qualify a worker to collect samples or perform abatement activities.

Upon successful completion of this course, you should :

- ⇒ Be aware of the health effects of asbestos exposure,
- ⇒ Be aware of where Asbestos Containing Materials (ACM) have been commonly used.
- ⇒ Be familiar with Regulation 278,
- ⇒ Be familiar with Regulation 490* (Does not apply at a project),
- ⇒ Have an understanding of an Asbestos Management Program
- ⇒ Been aware of Type 1, 2, 3 Work Procedures

Who should enroll in this training program?

Nearly every construction trade has the opportunity for potential exposure to asbestos during “normal” construction tasks including carpenters, electricians, ironworkers, painters, plumbers, sheet metal workers among others could benefit from this course.

As there are no asbestos mines and no asbestos manufacturing in Ontario Reg. 490 will apply in buildings which have a pre 1985 control program.

We can conduct the training at your facility or at our own training facility, whichever will suit your needs best.
